Commercial Applications of this unit

Produces **MILITARY SPECIFICATION JP-8 jet fuel**

The **TPI-4T-4A-1** picks up where the 4T-4A leaves off. This system, while providing the same product flow and additive delivery characteristics, goes one step further in terms of rugged dependability. The frame is heavier and **stronger** to survive **deployment from an aircraft**. The complete injection system is **shock mounted** with extra accessories provided to **enable delivery of additized fuel** in the most remote locations. Comes complete with a on-board CI and SDA tanks, custom tool kit, emergency spares, sampling segment and field refractometer for verifying FSII levels. Developed specifically for the United States Air Force, hundreds of **TPI-4T-4A-1** tactical injectors have performed in four wars and delivered countless millions of gallons of JP-8 fuel in virtually every climate and operating environment throughout the world.

INNOVATION—pure and simple

STANDARD FEATURES

- Proportionate to flow injection
- Heavy-duty 2" square tube frame
- 4" Cam-Lock product connections
- Proportionately blends FSII, CI and SDA to make JP-8 from commercially available Jet-A fuel (MIL-T-83133)
- Shock-mounted system for extreme deployment conditions
- 6 gallon stainless steel additive tank for CI
- 6 gallon stainless steel additive tank for SDA
- Hose assembly and hose for remote connections of 55 gallon drum for FSII
- Separate Suction Calibration Gauges and Sight Flow adjustments
- Separate Sample Probe assembly
- Complete tool set for field service
- B-2 Refractometer test kit for FSII concentration

TALK ABOUT TOUGH!

The Hammonds **TPI-4T-4A-1** Additive Injection System is designed to be deployed via military air-drop into remote and often dangerous, rough conditions. The units are designed to withstand the punishment of these conditions and provide our aircraft with safe, quick and dependable additive injection in extremely difficult surroundings.

TPI4T-4A-1

ALL UNITS COME EQUIPPED
with

- Hard-Shell Tactical Field Service Tool Kit
- Hand-Held Digital Refractometer Kit for measuring the FSII percentage in fuel.

6807 West Little York Road • Houston, Texas 77040 • (800) 582-4224

- Ratio adjustment for each additive
- Prime and purge valve provides a clean system
No operator contact with fuel or additive
- Calibration gauges allow adjustment without contact with the additive
- 6-Gallon CI and SDA tanks
- Custom product connections
